

Strat-IQ v3 live demos: run sheet

Nine screen-recorded demos for the Strat-IQ v3 process video · MGT4850 · Fall 2026

Before you record

Set up once (about 20 minutes)

1. On the Claude account you will record from, delete any old stratos- skills, then upload the 40 zips inside `stratiq-toolkit-skills.zip` (Settings → Capabilities → Skills). You should see 40 Strat-IQ skills on.
2. Create a Claude Project called **Strat-IQ Demo: EV**. Add to its knowledge: `strategy-ledger-ev-demo.json` (this folder) and `industries.json v2`. Keep the GLO-BUS files and the memo draft out of the Project; you attach them during the demo, which looks better on screen.
3. Keep this folder open in File Explorer so you can drag files into the chat.
4. Open `StratIQ_Workbook_demo.xlsx` once in Excel and press F9, so Excel has recalculated it before you record.

Recording settings

- 1920 × 1080, browser zoom 110-125% so text is readable on a phone. Hide the bookmarks bar; turn on Do Not Disturb.
- Record each demo as its own clip (Xbox Game Bar: Win + Alt + R, or Clipchamp / OBS). Name the clip with the demo number.
- Claude's wording differs from run to run; the numbers from the scripts do not. If a run wanders, stop and start a new chat in the same Project.
- Trim the waiting time in editing. A 40-second wait becomes 3 seconds with a “fast-forward” cut.

Demo data. The ledger, the GLO-BUS files and the memo draft are illustrative demo data, labelled as such in every file. They show what the tools do; they are not research to cite.

#	Demo	Deck slide	Clip length
1	Resume with “Run Strat-IQ”	after Part 1	1.5-2 min
2	Swap the base company	after Part 1	1.5-2 min
3	Which white space can we serve? (VRIO gap)	after Part 2	1-1.5 min
4	Strategy Interview	after Choose	3-4 min
5	Business case, risk analysis, expected value and the pilot	after Statistics	3-4 min
6	Hostile Q&A drill	after Test and Plan	2-3 min
7	Memo Coach on a weak draft	after Track	2-3 min
8	GLO-BUS: competitor map and the plan check	after GLO-BUS	2-3 min
9	Workbook: change one input, watch it move	after the Workbook	2-3 min

Demo 1. Resume with “Run Strat-IQ”

Shows: the ledger carries the work across chats; Strat-IQ checks what is done and continues.

Setup: new chat inside the Strat-IQ Demo: EV Project.

Type:

Run Strat-IQ

You should see: Strat-IQ finds `strategy-ledger-ev-demo.json` (BYD, global EVs), reports Part 1 and Part 2 complete, and Part 3 partly done (options, decision matrix, business case and expected value exist; the strategy statement is missing). It offers the modes and suggests D, make the strategy work.

Point at: “It didn’t ask me to start over. It read the ledger, found the gap (no strategy statement yet) and offered to continue from there.”

Demo 2. Swap the base company

Shows: Part 1 is about the industry, so it is kept; only the company analysis is redone.

Type:

Make Xiaomi the base company.

You should see: Part 1 kept as it is. Part 2 rerun for Xiaomi. On the KSF scorecard Xiaomi scores 5 on Software and UX (K2) but 1 on Local production footprint (K3), so its white space and its SWOT differ from BYD’s.

Point at: “Same industry, same evidence, different company, different strategy. That’s the point of separating Part 1 from Part 2.”

Reset: start a new chat before Demo 3 so the base company is BYD again.

Demo 3. Which white space can we actually serve?

Shows: VRIO stamps each empty space on the strategic map “supported” or “gap”.

Type:

Which of the white spaces on our strategic map can BYD actually serve?

You should see: two empty spaces. *Sub-EUR 25k EU compact with good software*: **supported**, because vertical battery integration (C1) passes all four VRIO tests and funds the price point. *Premium software subscription layer*: **gap**, because BYD’s in-car software (C3) fails the rarity test and Tesla and Xiaomi lead K2.

Point at: “An empty space on a map isn’t an opportunity until you can show you have what it takes to win there.”

Demo 4. Strategy Interview

Shows: the interview asks one question at a time, shows the evidence, and never picks.

Type:

Run the Strategy Interview for BYD.

Answers to give on camera (short, so the clip moves):

- Where is the opportunity? *"The sub-25k compact segment in Europe."*
- Can BYD win there? *"Yes on cost, because of the batteries. Not yet on brand trust."*
- Which generic strategy? *"Best-cost provider: good-enough software at a lower price."*
- What will BYD not do? *"Chase premium software subscriptions."*

You should see: each question arrives with the evidence behind it (map, KSFs, VRIO), a fit check against your answer, and at the end a strategy statement in your words, written to the ledger.

Point at: "It asked; I chose. If I ask it to pick, it hands the question back."

Demo 5. Business case, risk analysis, expected value and the pilot

Shows: the statistical decision tools: NPV and break-even, a tornado, a Monte Carlo simulation, expected value and a Bayesian pilot check.

Type, one at a time:

Run the business case for Option A from the ledger, then the risk analysis using the ranges in the ledger.

Now run expected value for all three options, and tell me whether the 12-month EU import test is worth its \$25M cost.

You should see (deterministic):

Result	Value
Option A NPV / IRR / payback	-\$34.5M / 9.5% (hurdle 10%) / 4.2 years
Break-even sentence	"The case holds only if revenue beats plan by 0.5%."
Tornado, top two bars	Units: -\$591M to +\$383M. Price: -\$632M to +\$264M
Monte Carlo (10,000 runs, seed 7)	Median -\$366M; P10 -\$770M; P90 +\$50M; NPV below zero 87% of the time
Expected NPV	B. Partner \$86M; A. EU plant \$60.5M; do nothing \$0
Maximin / EVPI	Do nothing (never loses) / \$120M
Flip point	A overtakes B if the chance of weak demand falls below 13.7%
Pilot: P(positive)	52%; after a positive result A leads (\$238M vs \$136M)
Pilot: after a negative result	B leads (\$32M vs -\$132M for A)
EVSI / net of the \$25M cost	\$53.25M / \$28.25M: worth running

Point at: "At plan, the EU plant is close to break-even. But the ranges skew to the downside, so most simulated futures lose money. Expected value prefers the partnership. And the pilot is worth \$53M because a positive result would switch the choice to the plant."

Demo 6. Hostile Q&A drill

Shows: practising the defence, scored, one question at a time.

Type:

Run the hostile Q&A drill on my recommendation: Option B, partner with a European OEM. Ask as the professor.

Answers to give: answer two questions on camera, one well and one weakly (for example, “*Because it’s less risky*”). Then type score me.

You should see: a question at a time; feedback on each answer naming the exhibit the answer should have cited; a score at the end with the weakest answer flagged.

Point at: “It never answers for me. It tells me which exhibit I should have used.”

Demo 7. Memo Coach on a weak draft

Shows: the coach finds the gaps the way the memo is graded, and returns questions, not text.

Setup: drag memo-draft-weak.docx into a new chat.

Type:

Coach my memo.

You should see these planted problems found (located by paragraph):

1. The recommendation is in the third paragraph, after a retelling of the company’s history.
2. “We believe”, “I think”, “we feel”.
3. Predictions stated as fact: “will grow 40% next year”, “will dominate Europe by 2028”, with no source.
4. The memo says NPV is +\$120M; Exhibit Q-1 says –\$34.5M.
5. It recommends A, but the Decision Matrix (M) ranks B first and Expected Value (Q-2) leads with B, and the memo does not explain why.
6. Reasons 1 and 2 are the same reason (cost); reason 3 cites no exhibit.
7. Exhibit B (management questions) is missing.

Then type: Rewrite my recommendation paragraph. The coach declines and offers the check or the drill instead. Keep this in the clip; it shows the rule.

Demo 8. GLO-BUS: competitor map and the plan check

Shows: strategic groups from the Competitive Intelligence Report, and the typo the plan check catches.

Part 1. Type, with globus/cir-Y7.csv attached:

Analyse this competitor report for company C: strategic groups and white space for cameras and drones.

You should see: a groups chart per product and region. Company C is the camera **value leader** and share leader in North America, Europe-Africa and Asia-Pacific, but sits in the **low-cost / economy** group in Latin America, so its apparent strategy drifts there. In drones C is a **premium differentiator** in every region; in North America and Latin America the share leader is a low-cost company.

Part 2. Attach StratIQ_workbook_demo.xlsx and globus/globus-capture-C-Y8-entered.json, then type:

Check our Year 8 entries against the plan.

You should see: 6 decisions match; 1 mismatch: **Price (Cameras, North America): planned \$239, entered \$293.**

Point at: “Two digits swapped. That typo would have priced us out of North America for a year. The check took a minute. Strat-IQ never changed the entry; we fix it ourselves in GLO-BUS.”

Demo 9. Workbook: change one input, watch it move

Shows: live formulas, the Risk Analysis sheet, Season by Year and the KPI Charts.

Type (optional; the prebuilt workbook is in this folder):

Build our Strat-IQ workbook from the ledger with our Year 6 and Year 7 GLO-BUS captures.

In Excel:

1. **Risk Analysis** sheet. Point at the tornado (Units on top) and *Probability NPV < 0* (about 87%).
2. Change **Units, Low** from -20% to -10% . The Units bar shrinks and the chance of a loss falls. Press F9 to draw the simulation again; the numbers move slightly, which is what a simulation does.
3. **Expected Value** sheet. Change the pilot cost from 25 to 60: the net value turns negative.
4. **Season by Year** tab. Scroll right: each year has its value and its change ($\blacktriangle$ $\blacktriangledown$). EPS rose from \$1.85 to \$2.10 but stayed under the investor expectation (\$2.00, then \$2.15); the credit rating improved from B+ to BB-.
5. **KPI Charts** and **Competition by Year**: the trends in graphs, and every company's score and rank by year.

Point at: “Every grey cell is a formula. Change one input and you find out which assumptions really matter.”

Files in this folder

File	Used in
strategy-ledger-ev-demo.json	Demos 1-7, 9 (put it in the Project)
business-case-demo.csv, risk-ranges-demo.csv, expected-value-demo.csv, pilot-demo.csv	Demo 5 (the skills build these from the ledger; the CSVs let you rerun the scripts)
memo-draft-weak.docx (and .md)	Demo 7
globus/cir-Y7.csv, globus/groups-Y7.png	Demo 8, part 1
globus/globus-capture-C-Y6.json, globus/globus-capture-C-Y7.json	Demo 9 (Season by Year, Competition by Year, KPI Charts) and the weekly review
globus/globus-capture-C-Y8-entered.json	Demo 8, part 2 (contains the typo)
StratIQ_Workbook_demo.xlsx	Demos 8 and 9
